Across

1. Biggest is the aorta, carrying blood from heart to the body.
3. Compact (cortical) or trabecular (spongy), but always hard.
8. Connects bones to bones, such as the famed ACL.
10. These cells fight germs and foreign bodies, like superheroes
13. Muscles flex, extend, or rotate these.
14. Blood making (hematopoietic) tissue.
16. A thick one is good. A big one won't make you smarter.
17. Elastic tissue in joints, ears, even your nose.

Down

2. An extension of muscles that attaches them to bones.
3. Non-Newtonian fluid you and vampires can't live without.
4. I can be an innie (endo) or an outie (exo).
5. Tiny clumping cells that stop bleeding.
6. Biggest one is Vena Cava, returning blood to right ventricle
7. Red blood cells carry CO2 and this gas.
9. Your trunk, or thorax and abdomen.
11. Articulates with scapula in ball-and-socket joint.
12. If they say "break a leg", don't--this is your biggest bone.
15. Articulates with humerus in hinge joint.
